Customer Reviews

“It aims to be a complete overview of the design, implementation and control of planetary rovers, ranging widely from details of past rovers, through overviews of algorithm research into the process of bidding and managing projects for the European Space Agency (ESA). It targets a wide audience from final year undergraduates to industry engineers involved with rover development or anyone involved in rover design. I would recommend this book to anyone working or interested in the field.” (Dr. Iain Wallace, The Aeronautical Journal, January, 2017)
