It's like this came to the surface briefly in the late 70's, and was absorbed into the tsunami of growth in cybernetics, anthropology and other disciplines (not to mention marketing) since then, so that most lay people don't even know it exists. Mind, nature, life, evolution, science, society: it's all just a big fully and deeply interconnected process, and Bateson provides the lens to see it with.

A fusion of of philosophy and the social sciences.

Clean copy in good shape.

Soaking This One In!!!

EVERYONE should read this book!

Fantastic book

Thank You

I didn't find it very approachable (with perhaps one exception - the chapter on things every schoolboy should know). Somewhat of a tedious read.
